Content of presentation:

- Installation Qualification IQ
- Operational Qualification OQ
- **Performance Qualification PQ**
- Process Control and Monitoring

_

Cameron Quality Consultants

Installation qualification

undertaken to demonstrate that the sterilization equipment has been supplied and installed in accordance with specification.

RISØ

Whether or not data are "in accordance with their specification" depends on agreement

Measurements often the same as for Operational Qualification

Responsibility: Facility Operator

ISO 11137-1, sect 9.1

IRISØ

0

_

Cameron Quality Consultants

Operational qualification

- carried out by irradiating appropriate test material to demonstrate the capability of the equipment to deliver the sterilization process that has been defined.
- provides baseline data to show consistent operation of the facility

Responsibility: Facility Operator

ISO 11137-1, sect 9.2

_

Medical Devices Sterilization for Manufacturers

Cameron Quality Consultants

Operational qualification Gamma

- dose distribution in reference product(s)
- dose as function of dwell time
- process interruption
- mix of products

OQ gamma cont..

Dose mapping

- **Dose maps must be made with fully loaded irradiation chamber**
- Range of densities of reference product must cover extremes of products to be irradiated
- Additional measurement:
 - effect of process interruption

IRISØ

_

Cameron Quality Consultants

OQ gamma cont..

Dose mapping

- Dose mapping shall be carried out on a sufficient number of irradiation containers to allow determination of the distribution and variability of dose between containers
- Dose mapping must be repeated when significant changes of the irradiation plant are made, *e.g.* source change

Ξ

Cameron Quality Consultants

Operational qualification Electron beam

- Characteristic parameters to be measured
 - dose distribution reference product
 - scan width
 - energy
 - dose as function of speed, current, beam width
 - beam spot
 - process interruption

RISØ

OQ E-beam cont..

- E-beam OQ should be repeated when significant changes of the irradiation plant are made that may influence dose or dose distribution.
- It is recommended to repeat OQ at regular intervals, e.g. annually in order to demonstrate consistent operation.

ameron Quality Consultants

Performance qualification

Concerns dose mapping of real product

to identify the location and magnitude of minimum and maximum doses

and

to determine the relationship between the min and max doses and the routine dose

Responsibility: Primary Manufacturer

ISO 11137-1, sect 9.3

Copenhagen Medical Devices consulting aps

 \bigcirc

 $\overline{}$

Cameron Quality Consultants

Performance qualification ..cont..

Purpose of dose mapping

- to demonstrate that:

D(min) > D(Steril) and D(max) < D(acceptable)

D (min) determined by sterilization requirements

• D (max) determined by radiation-induced changes in product

Ξ

Cameron Quality Consultants

Performance qualification ..cont..

Strategies for dose mapping

- based on:
- OQ measurements
- Inhomogeneous product distribution, orientation, voids, interfaces.
- Experience
- Processing categories

Limitations of dose mapping

- Ability to measure "the true" value of D(min) or D(max)
- Location of dosimeter
- Resolution of dosimeter system

Measurement Uncertainty

Dose mapping shall be carried out using representative irradiation containers sufficient in number to determine the variability of dose between containers

Practical approach:

Either dose map in detail 3-10 containers

or

- dose map in detail one cntainer
- repeat measurement of D (min) and D (max) in several (e.g. 10) containers
- evaluate measurement uncertainty taking into account all uncertainty components.

Cameron Quality Consultants

Performance qualification ...cont...

Setting Process Limits

Select process parameters

- gamma: e.g. timer setting
- e-beam: e.g. conveyor speed
- so that D(min) will exceed D(sterile) and
- so that D(max) will not exceed D(acceptable)

Select process limits based on the measured uncertainty.

Practical approach

 select process parameters so that D(min) is two standard deviations higher than D(steril)

Normal distribution

Performance qualification ...cont..

_

RISØ

Performance qualification ..cont..

Repetition of Performance Qualification Dose Map

- Only needed if product is changed or if facility is changed
- review of documentation at defined intervals is recommended, e.g. every 3 years
