Abstract

- This study uses a soft-linking methodology to harmonise two complex global top-down and bottom-up models with a regional China focus. The baseline follows the GDP and demographic trends of the Shared Socioeconomic Pathways (SSP2) scenario, down-scaled for China, while the carbon tax scenario follows the pathway of the Asia Modelling Exercise.
- We find that **soft-linking allows "bridging the gap" and reducing uncertainty between these models**. Without soft-linking, baseline result ranges for China in 2050 are 240-260 EJ in primary energy, 180-200 EJ in final energy, 8-10 GWh in electricity production and 15-18 Gt in carbon dioxide emissions.
- The highest uncertainty in modelling results can be mapped for China's future coal use in 2050, in particular in electricity production.
- Sub-regional China features, when incorporated into complex global models, do not increase uncertainty in China-specific modelling results further. These new sub-regional China features can now be used for a more detailed analysis of China's regional developments in a global context.

知之为知之,不知为不知,

是知也

If you know, recognize that you know,

If you don't know, then realize that you don't know:

That is knowledge.

Confusius

Highlights

To the best of our knowledge, this study is...

- the 1st global model comparison with harmonised socio-economic assumptions for China, using a moderate IPCC Shared Socio-Economic Pathway Scenario (SSP2).
- the 1st soft-linking study that **down-scales global energy scenarios for three regions of China**.

Key results of this study are benchmarked with global and China specific results derived from 23 global models from the 2012 **Asia Modelling Exercise**. A **highly transparent, interdisciplinary and open-data approach** is applied to cope with uncertainty.

Global and China-specific insights

社 会主义和市场经济之间不存在根本矛 盾

Socialism and market economy are not incompatible.

Deng Xiaoping

Top Down - Bottum Up - Model Linking Framework

我坚信,

到中国共产党成立100年时全面建成小康社会的目标一定能实现,

到新中国成立100年时建成富强民主文明和谐的社会主义现代化国家的目标一定能实现,

中华民族伟大复兴的梦想一定能实现

Achieving the "Two 100s":

the material goal of China becoming a "moderately well-off society" by about 2020,

the 100th anniversary of the Chinese Communist Party,

and the modernization goal of China becoming a fully developed nation by about 2049, the 100th anniversary of the People's Republic.

Xi Jinping

Final energy use –

SSP2 harmonised baselines, down-scaled for China

CO₂ emissions –

SSP2 harmonised baselines, down-scaled for China

CO₂ emissions under a carbon tax– Replication of AME tax pathway towards 2050
