**Table S1** Field studies that explore aspects of the effects of elevated  $p\text{CO}_2$  on settlement (or recruitment) of marine organisms at naturally occurring  $\text{CO}_2$  vents. The table summarises the information available on the organism studied, the location of the  $\text{CO}_2$  vent site and the different  $p\text{CO}_2$  levels present, as well as the effects shown by each study. The table comprises information on different taxa of invertebrates, algae and bacterial communities. Although this review manuscript focuses on marine (invertebrate and fish) larvae, this table also includes other organisms that have previously been studied at the  $\text{CO}_2$  vents.

Phylum, species	Vent site	$p\text{CO}_2$ levels	Effects found	References
Different taxa, benthic invertebrates and microfauna	Ischia, Italy	<ul style="list-style-type: none"> <li>- Stations N1 &amp; S1, normal pH conditions (8.06 - 8.15)</li> <li>- Stations N2 and S2, intermediate pH conditions with high pH fluctuations: range 7.27–7.99 and 7.49–7.89,</li> <li>- Stations N3 and S3, low pH conditions: range 7.26–7.60 and 7.08–7.79</li> </ul>	Calcareous foraminiferans, serpulid polychaetes, gastropods and bivalves showed highly significant reductions in recruitment with increase in $p\text{CO}_2$	Cigliano et al. 2010
			Only one species of polychaete had higher abundances at the station presenting the lowest pH values, although a wide range of polychaetes and small crustaceans was able to settle and survive under these conditions.	
			A few taxa were particularly abundant at stations presenting intermediate amounts of $p\text{CO}_2$	

Phylum, species	Vent site	pCO <sub>2</sub> levels	Effects found	References
Algae	Ischia, Italy	<ul style="list-style-type: none"> <li>- Normal pH = Sn (pH<sub>T</sub> 8.06 ± SD 0.09)</li> <li>- Normal pH=Nn (pH<sub>T</sub> 7.95 ± SD 0.06)</li> <li>- Medium pH = Sm (pH<sub>T</sub> 7.75 ± SD 0.3)</li> <li>- Medium pH = Nm (pH<sub>T</sub> 7.77 ± SD 0.19)</li> <li>- Low pH = S1 (pH<sub>T</sub> 6.59 ± SD 0.51)</li> <li>- Low pH = N1 (pH<sub>T</sub> 7.20 ± SD 0.36)</li> </ul>	Decrease in number of species recorded in reduced seawater pH stations	Porzio et al. 2013
Benthic invertebrates (polychaetes, amphipod, isopod and tanaid crustaceans and molluscs)	Ischia, Italy	<ul style="list-style-type: none"> <li>- Stations N1 &amp; S1, normal pH conditions: 8.06 – 8.15</li> <li>- Stations N2 &amp; S2, intermediate pH conditions with high pH fluctuations: 7.27–7.99 and 7.49–7.89,</li> <li>- Stations N3 &amp; S3, low pH conditions: 7.26–7.60 and 7.08–7.79</li> </ul>	<ul style="list-style-type: none"> <li>- No significant differences in # of organisms settled</li> <li>- Significant differences in diversity</li> <li>- Normal pH stations were significantly more diverse</li> </ul>	Ricevuto et al. 2012
Microalgal assemblages (periphyton)	Vulcano Island, Italy	<ul style="list-style-type: none"> <li>- Ambient pH (mean 8.18)</li> <li>- Intermediate pH (mean 8.05)</li> <li>- Low pH (mean 7.49)</li> </ul>	<ul style="list-style-type: none"> <li>- Significant changes in periphyton communities</li> <li>- Increase in chl a concentration and in diatom abundance with increasing pCO<sub>2</sub></li> <li>- No change in cyanobacteria</li> </ul>	Johnson et al. 2013
Benthic polychaete species: <i>Amphiglena mediterranea</i> , <i>Platynereis dumerilii</i> , <i>Syllis prolifera</i>	Ischia, Italy	<ul style="list-style-type: none"> <li>- Control N1 = pH 8.0 ± 0.1</li> <li>- Control S1 = pH 8.1 ± 0.1</li> <li>- Intermediate N2 = pH 7.8 ± 0.2</li> <li>- Intermediate S2 = pH 7.8 ± 0.3</li> <li>- Acidified N3 = pH 7.2 ± 0.4</li> <li>- Acidified S3 = pH 6.6 ± 0.5</li> </ul>	Significant increase in abundance of the three target species in reduced seawater pH conditions	Ricevuto et al. 2014
Bacterial and archaeal communities	Papua New Guinea	<ul style="list-style-type: none"> <li>- low pCO<sub>2</sub>: pH<sub>T</sub> 7.97–8.14, 296–494ppm pCO<sub>2</sub></li> <li>- high pCO<sub>2</sub>: pH<sub>T</sub> 7.73–8.00, 444–953ppm pCO<sub>2</sub></li> </ul>	<ul style="list-style-type: none"> <li>- Increased microbial richness with increase in pCO<sub>2</sub></li> <li>- Shift in microbial composition along the natural gradient</li> </ul>	Raulf et al. 2015

Phylum, species	Vent site	$p\text{CO}_2$ levels	Effects found	References
Microborers (cyanobacteria, chlorophytes, rhodophytes and fungi)	Maug, Commonwealth of the Northern Mariana Islands	- High $p\text{CO}_2$ site: mean pH $7.94 \pm 0.051$ - Mid- $p\text{CO}_2$ site: mean pH $7.98 \pm 0.027$ - Control $p\text{CO}_2$ site: mean pH $8.04 \pm 0.016$	Increased colonization (settlement) of microbores at lower pH (higher $p\text{CO}_2$ )	Enochs et al. 2016
Crustose Coralline Algae	Papua New Guinea	- Control sites: $\text{pH}_T$ 8.02 - 7.98 / $p\text{CO}_2$ 346 - 413 $\mu\text{atm}$ - High $\text{CO}_2$ sites: $\text{pH}_T$ 7.95 - 7.72/ 441 - 998 $\mu\text{atm}$	Total CCA cover decreased with increase in $p\text{CO}_2$	Fabricius et al. 2015
Vermetids (gastropoda)	Vulcano Island, Italy	- Low pH: $\sim 7.31$ - Mid pH: $\sim 7.73$ - High pH: $\sim 8.03$ - CTL Vent: $\sim 8.15$	Recruitment success adversely affected at the Low and the Mid pH sites	Milazzo et al. 2014
Tropical coral recruits	Papua New Guinea	- Low pH: $\sim 7.8$ - High pH: $\sim 8.0$	- Reduced coral settlement and recruitment in presence of substrates (CCA) pre-conditioned at low pH. - Lower settlement associated with reduced CCA cover at reduced pH site.	Fabricius et al. 2017
Calcareous species of invertebrates Fleshy seaweeds	Ischia, Italy	- Control $\text{pH}_{\text{north,south}} = 8.0, 8.1$ - Low $\text{pH}_{\text{north,south}} = 7.8, 7.8$ - Extreme low pH $< 7.4$	- Early successional stages: Similar rates of recruitment of calcareous species at both ambient and low pH sites - Later succession: Fleshy seaweeds in low pH conditions	Kroeker et al. 2013a
Benthic rocky reef assemblages	Ischia, Italy	- Control $\text{pH}_{\text{north,south}} = 8.0, 8.1$ - Low $\text{pH}_{\text{north,south}} = 7.8, 7.8$ - Extreme low pH $< 7.4$	- Significantly different communities among pH zones after 32 months: - dominance of calcareous algae in ambient pH; - dominance of fleshy algae in low pH zones; - dominance of biofilm/filamentous algae and erect fleshy algae in extreme low pH zones;	Kroeker et al. 2013b

Phylum, species	Vent site	pCO <sub>2</sub> levels	Effects found	References
			- greater variability in the communities in the ambient and extreme low pH zones.	
Crustose coralline algae	Ischia, Italy	<ul style="list-style-type: none"> <li>- Control pH<sub>north,south</sub> = 8.0, 8.1</li> <li>- Low pH<sub>north,south</sub> = 7.8, 7.8</li> <li>- Extreme low pH &lt; 7.4</li> </ul>	<ul style="list-style-type: none"> <li>- Lower CCA abundance in the low pH</li> <li>- CCA settled in extreme low pH were significantly smaller and presented altered mineralogy</li> </ul>	Kamenos et al. 2016

**Table S2:** Single stressor laboratory studies that explore ocean acidification induced changes in larval settlement for different taxonomic groups. The table includes information on the pH treatments or  $p\text{CO}_2$  levels tested, the effects found and the biogeographical region of origin of the species tested.

Phylum, species	pH or $p\text{CO}_2$ range tested	Effects found	References	Region
<b>Cnidaria</b>				
<i>Acropora digitifera</i>	- $\text{pH}_T$ 8.0 - $\text{pH}_T$ 7.6 - $\text{pH}_T$ 7.3	Significant decline in metamorphosis rate under reduced seawater pH conditions after both short (2 h) and long (7 d) term exposure	Nakamura et al. 2011	Japan
<i>Acropora gemmifera</i>	- pH 8.1 - pH 7.8 - pH 7.5	Reduced settlement percentage in lower pH treatments	Yuan et al. 2018	China
<i>Acropora millepora</i>	- control (pH 8.04, 401 $\mu\text{atm CO}_2$ ) - Future $\text{CO}_2$ concentrations #1 (pH 7.79, 807 $\mu\text{atm}$ ) - Future $\text{CO}_2$ concentrations #2 (pH 7.60, 1299 $\mu\text{atm}$ )	Negative effects on settlement due to increased $p\text{CO}_2$	Doropoulos et al. 2012	Australia
<i>Acropora palmata</i>	- average ambient $p\text{CO}_2$ conditions ( $\sim 400 \mu\text{atm}$ ) - Mid- $\text{CO}_2$ conditions ( $\sim 560 \mu\text{atm}$ ) - High- $\text{CO}_2$ conditions ( $\sim 800 \mu\text{atm}$ )	Settlement was negatively impacted by increasing $p\text{CO}_2$	Albright et al. 2010	Florida, USA

Phylum, species	pH or pCO <sub>2</sub> range tested	Effects found	References	Region
<i>Acropora selago</i>	- Ambient (pH 7.98, 447 $\mu$ atm CO <sub>2</sub> ) - Mid elevated treatment (pH 7.81, 705 $\mu$ atm CO <sub>2</sub> ) - High elevated treatment (pH 7.60, 1214 $\mu$ atm CO <sub>2</sub> )	Negative effects on settlement. Settlement decreased with increase in pCO <sub>2</sub> for all CCA taxa.	Doropoulos & Diaz-Pulido 2013	Australia
<i>Acropora spicifera</i>	- Control pCO <sub>2</sub> : $\pm$ 250 uatm - High pCO <sub>2</sub> : + 900 uatm	No significant effects on settlement	Foster et al. 2015	Australia
<i>Acropora tenuis</i>	- Control pH - Reduced pH 7.6 (1000 $\mu$ atm CO <sub>2</sub> )	No effects on settlement	Kurihara 2008	Japan
<i>Acropora millepora</i>	<i>Experiment 1:</i> Larval settlement on pre conditioned CCA (pH 8.1, pH 7.9, pH 7.7 and pH 7.5) pH treatments: 8.1, 7.9, 7.7 and 7.5	Reduced settlement on CCA pre-exposed to different pH treatments	Webster et al. 2013b	Australia
	<i>Experiment 2:</i> Larval settlement on conditioned CCA at ambient pH (8.1) pH treatments: 8.1, 7.9, 7.7 and 7.5	No significant effects on settlement		
<i>Acropora millepora &amp; Acropora tenuis</i>	<i>Experiment 3:</i> Larval settlement on CCA extract. Larvae preconditioned for 24h in different treatments (pH 8.1, pH 7.9, pH 7.7 and pH 7.5) Experimental pH treatments: 8.1, 7.9, 7.7 and 7.5	No significant effects on settlement		
<i>Pocillopora damicornis</i>	- Control pH = 8.1 - Treatment 1: pH = 7.9 - Treatment 2: pH = 7.6	Decrease in pH caused a strong decline in larval settlement rates, with the lowest rate at pH 7.6. At pH 7.9 and 7.6 all larvae were unable to complete	Viyakarn et al. 2015	Thailand

Phylum, species	pH or $p\text{CO}_2$ range tested	Effects found	References	Region
		metamorphosis		
<i>Porites asteroides</i>	- pH 8.1 - pH 7.6	No significant effects of reduced pH on coral settlement	Olsen et al. 2015	Florida, USA
<i>Porites asteroides</i>	- present $p\text{CO}_2$ conditions (380 ppm) - projected $p\text{CO}_2$ for the year 2065 (560 ppm) - projected $p\text{CO}_2$ for the year 2100 (720 ppm)	No direct correlation between increase of $p\text{CO}_2$ and decrease on settlement	Albright et al. 2008	Florida, USA
<i>Porites astreoides</i>	- ambient $p\text{CO}_2$ conditions (380 $\mu\text{atm}$ ) - middle century predicted $p\text{CO}_2$ (560 $\mu\text{atm}$ ) - end of century predicted $p\text{CO}_2$ (800 $\mu\text{atm}$ )	- Significant effects on settlement, but only in tiles preconditioned in high $p\text{CO}_2$ seawater conditions - indirect effects by altering settlement substrate	Albright & Langdon 2011	Florida, USA
<b>Annelida</b>				
<i>Hydroides elegans</i>	- Control: $\text{pH}_{\text{NBS}}$ 8.17 - Reduced: $\text{pH}_{\text{NBS}}$ 7.56	No effects on settlement and metamorphosis	Lane et al. 2013	Hong Kong
<b>Mollusca</b>				

Phylum, species	pH or pCO <sub>2</sub> range tested	Effects found	References	Region
<b>Gastropoda</b>				
<i>Haliotis diversicolor</i> and <i>H. discus hannai</i>	- Control pCO <sub>2</sub> : 447 μatm ~ pH <sub>NBS</sub> 8.15 - High pCO <sub>2</sub> : 1500 μatm ~ pH <sub>NBS</sub> 7.7 2000 μatm ~ pH <sub>NBS</sub> 7.6 3000 μatm ~ pH <sub>NBS</sub> 7.4	<u>Reduced survival and metamorphosis</u>	Guo et al. 2015	China
<i>Crepidula fornicata</i>	- pH <sub>T</sub> 7.51 - pH <sub>T</sub> 7.71 - pH <sub>T</sub> 7.96	<u>Significantly higher settlement and metamorphosis at lower pH</u>	Dooley & Pires 2015	Washington, USA
<b>Bivalvia</b>				
<i>Macoma balthica</i>	- Ambient pH <sub>T1</sub> = 7.94 - Ambient pH <sub>T2</sub> = 7.94 - pH <sub>T3</sub> = 7.80 - pH <sub>T4</sub> = 7.51 - pH <sub>T5</sub> = 7.43	Negative effects on settlement due to reduced pH	Jansson et al. 2016	Baltic Sea
<b>Bryozoa</b>				
<i>Bugula neritina</i>	Range pH treatments (8.0 to 6.5)	- Time to settle increased with reduction in pH. - No lethal effects showed at lower pH.	Pecquet et al. 2017	Hong Kong
<b>Arthropoda</b>				
<b>Maxillopoda</b>				
<i>Amphibalanus amphitrite</i>	- Ambient pH 8.2 - Low pH 7.4	No influence on settlement due to reduced pH	McDonald et al. 2009	North Carolina, USA

Phylum, species	pH or pCO <sub>2</sub> range tested	Effects found	References	Region
<i>Balanus amphitrite</i>	- Ambient pH: 8.2 - Low pH: 7.6	No influence on settlement due to reduced pH	Campanati 2016	Hong Kong
<i>Malacostraca</i>				
<i>Stenopus hispidus</i>	- 400 ppm CO <sub>2</sub> (current-day control) - 700 ppm CO <sub>2</sub> - 850 ppm CO <sub>2</sub>	Significant negative effects in ability to recognize conspecific cues important for settlement	Lecchini et al. 2017	French Polynesia Japan
<b>Echinodermata</b>				
<u>Echinoidea</u>				
<i>Paracentrotus lividus</i>	- Present average pH 8.1 - Average predicted for 2100, pH 7.7 - Extreme predicted for 2100, pH 7.4	- Delay in larval settlement at pH 7.7 - No successful settlement at pH 7.4	García et al. 2015	Mediterranean and NE Atlantic Ocean
<i>Strongylocentrotus droebachiensis</i>	- pH <sub>T</sub> = 8.07 (~ 361 μatm CO <sub>2</sub> ) - pH <sub>T</sub> = 7.69 (~ 942 μatm CO <sub>2</sub> )	No significant effect of pCO <sub>2</sub> in larval settlement	Dupont et al. 2013	Boreal coastal ecosystems
<u>Asteroidea</u>				

<b>Phylum, species</b>	<b>pH or pCO<sub>2</sub> range tested</b>	<b>Effects found</b>	<b>References</b>	<b>Region</b>
<i>Acanthaster cf. solaris</i>	<ul style="list-style-type: none"> <li>- Pre-industrial pH<sub>NBS</sub> 8.25 target</li> <li>- Present conditions pH<sub>NBS</sub> 8.1 target</li> <li>- Future medium conditions pH<sub>NBS</sub> 8.0 target</li> <li>- Future low conditions pH<sub>NBS</sub> 7.9 target</li> </ul>	<ul style="list-style-type: none"> <li>- Significant negative effects on settlement when settlement substrates were previously conditioned in the different pH treatments.</li> <li>- No significant effects on settlement only due to water chemistry (settlement experiment 2)</li> </ul>	Uthicke et al. 2013	Australia
<b>Fish</b>				
<i>Amphiprion percula</i>	<ul style="list-style-type: none"> <li>- Control pH 8.15</li> <li>- Predictions for the year 2100: pH 7.8</li> <li>- Low pH 7.6</li> </ul>	Significant reduction in homing behaviour due to loss in olfactory capacity	Munday et al. 2009	Australia
<i>Chromis viridis</i>	<ul style="list-style-type: none"> <li>- 400 ppm CO<sub>2</sub> (current-day control)</li> <li>- 700 ppm CO<sub>2</sub></li> <li>- 850 ppm CO<sub>2</sub></li> </ul>	Significant negative effects in ability to recognize conspecific cues important for settlement	Lecchini et al. 2017	French Polynesia Japan

<b>Phylum, species</b>	<b>pH or <math>p\text{CO}_2</math> range tested</b>	<b>Effects found</b>	<b>References</b>	<b>Region</b>
<i>Lates calcarifer</i>	pH 8.19 ~ 400 $\mu\text{atm CO}_2$ pH 7.70 ~1675 $\mu\text{atm CO}_2$	Negative effects of elevated $p\text{CO}_2$ in the auditory preference of the fish at time of settlement	(Rossi et al. 2015)	Tropical areas between eastern Indian Ocean to the western Central Pacific
<i>Lates calcarifer</i>	- pH 8.13 ~ 465 $\mu\text{atm CO}_2$ - pH 7.70 ~1477 $\mu\text{atm CO}_2$	Negative effects of reduced pH on attraction by larval fish towards physico-chemical cues for settlement	Pistevos et al. 2017	Tropical areas between eastern Indian Ocean to the western Central Pacific
<i>Pomacentrus amboinensis</i>	- 440 ppm $\text{CO}_2$ (current-day control) - 700 ppm $\text{CO}_2$ - 850 ppm $\text{CO}_2$	Impairment in olfactory discrimination of settlement cues	Devine et al. 2012	Australia

Phylum, species	pH or $p\text{CO}_2$ range tested	Effects found	References	Region
<i>Pomatoschistus pictus</i>	- pH 8.06 ~ 530 $\mu\text{atm CO}_2$ - pH 7.66 ~ 1500 $\mu\text{atm CO}_2$	Negative effects of high $\text{CO}_2$ in auditory responses important for settlement	Castro et al. 2017	Eastern Atlantic Ocean and Mediterranean Sea

**Table S3:** Multiple stressor laboratory studies that explore changes in settlement caused by ocean acidification (OA) in conjunction with a second stressor. This table includes information on taxa, OA treatment levels and other stressors tested, as well as biogeographical region of origin of the species tested.

Phylum, species	OA Treatments	Other stressor tested	Effects on settlement	References	Region
<b>Porifera</b>					
<i>Carteriospongia foliascens</i>	- pH <sub>T</sub> = 8.1 - pH <sub>T</sub> = 7.8 - pH <sub>T</sub> = 7.6	T = 28.5°C T = 30°C T = 31.5°C	No significant effects	Bennett et al. 2016	Australia
<b>Cnidaria</b>					
<i>Acropora spicifera</i>	- Control pCO <sub>2</sub> = ± 250 µatm - High pCO <sub>2</sub> = ± 900 µatm	Control T = 24°C High T = 27°C	No significant effects	Foster et al. 2015	Subtropical - Western Australia
<i>Porites astreoides</i>	- pH = 8.0 - pH = 7.85	- Contact with the alga <i>Styopodium zonale</i>  - Two settlement substrates: - CCA - Tiles with biofilm	No significant effects	Campbell et al. 2017	Caribbean

Phylum, species	OA Treatments	Other stressor tested	Effects on settlement	References	Region
<i>Porites astreoides</i>	- pH = 8.1 - pH = 7.6	Two Temperatures: - Ambient (28°C), - Elevated (31°C)  Two settlement substrates: - Plastic algal mimic - Live Dictyota spp.	No significant effects	Olsen et al. 2015	Caribbean
<i>Porites panamensis</i>	- Control pH = 8.08 - Low pH = 7.85	Control T = 28.4°C High T = 29.6 °C	No significant effects	Anlauf et al. 2011	Tropical Eastern Pacific
<b>Mollusca</b>					
<i>Gastropoda</i>					
<i>Crepidula onyx</i>	- Control pH = 8.00 - Medium pH = 7.7 - Low pH = 7.3	Algae grown at - Control pH = 8.00 - Medium pH = 7.7 - Low pH = 7.3	- No effects of pH or diet alone on the settlement  - Enhanced settlement at low pH + diet low quality	(Maboloc & Chan 2017)	Hong Kong
<i>Bivalvia</i>					

Phylum, species	OA Treatments	Other stressor tested	Effects on settlement	References	Region
<i>Magallana gigas</i> (formerly <i>Crassostrea gigas</i> )	- pH <sub>NBS</sub> 8.04 - pH <sub>NBS</sub> 7.47	- Temperature: 24 and 30 °C - Salinity: 15 and 25 psu	- Reduced metamorphosis due to carryover effects in larvae - Significant delays in pre- and post-settlement growth.	Ko et al. 2014	China
<b>Arthropoda</b>					
<i>Maxillopoda</i>					
<i>Amphibalanus improvisus</i>	pCO <sub>2</sub> = 400 µatm pCO <sub>2</sub> = 1250 µatm pCO <sub>2</sub> = 3250 µatm	- T = 12°C - T = 20°C - T = 27°C	No significant effects	(Pansch et al. 2012)	Baltic Sea
<i>Balanus amphitrite</i>	pCO <sub>2</sub> = 400µatm pCO <sub>2</sub> = 750 µatm pCO <sub>2</sub> = 1500 µatm	- Four temperatures (28°C, 30°C, 32°C and 34°C) - Two nutrient conditions (unenriched and enriched)	- No direct effect on settlement due to acidification alone - Reduced settlement due to warming individually or in combination with acidification	(Baragi & Anil 2017)	India
<b>Echinodermata</b>					
<i>Echinoidea</i>					
<i>Arbacia lixula</i>	pH <sub>T</sub> = 8.09 pH <sub>T</sub> = 7.69	T = 16.0 °C T = 17.5 °C T = 19.0 °C	Reduced settlement	(Wangensteen et al. 2013)	Mediterranean and tropical Eastern Atlantic

Phylum, species	OA Treatments	Other stressor tested	Effects on settlement	References	Region
<i>Heliocidaris erythrogramma</i>	pH = 7.8 pH = 7.6	T = +2 °C T = +4 °C	No effects on settlement in control pH treatments at both temperatures (Effects on settlement not reported for low pH treatments)	(Byrne, Ho, et al. 2011)	Subtropical Australia
<i>Heliocidaris erythrogramma</i>	pH treatments at which the CCA were conditioned prior to larval settlement assays : pH = 8.1 pH = 7.6	Temperature: - 20.5°C - 24 °C	Reduction in larval settlement when placed in presence of CCA conditioned under any of the elevated temperatures	(Huggett et al. 2018)	Subtropical Australia

Phylum, species	OA Treatments	Other stressor tested	Effects on settlement	References	Region
<i>Paracentrotus lividus</i>	pH = 8.1 pH = 7.7 pH = 7.4	T = 19°C T = 20.5°C T = 22.5°C	<ul style="list-style-type: none"> <li>- No settlement observed at the lowest T and pH.</li> <li>- Unsuccessful settlement at the highest T and lowest pH (7.4).</li> <li>- The rest of the results show no significant effect on settlement due to reduced pH.</li> <li>- Enhanced settlement at 20.5°C</li> </ul>	(García et al. 2015)	Mediterranean and NE Atlantic Ocean, from Ireland to Canary Islands
