Correction: Understanding cation effects in electrochemical CO₂ reduction

Stefan Ringe,*ab Ezra L. Clark,†cd Joaquin Resasco, e Amber Walton, c Brian Seger, d Alexis T. Bell c and Karen Chan* f

In the original version of the manuscript, the fit function presented in the caption of Fig. 7 for the hydrated ions was wrong. The correct function was \(-2.2x + 7.2\) (change highlighted in bold). Therefore the \(x\)-axis positions of the different cations in Fig. S17 which were obtained from this correlation function were also wrong. The correct Figure is as follows:

In addition, Fig. 6a used the wrong cation sizes for the organic cation data points. The updated Figure is given below:

Previous studies electrodeposited a Ag monolayer on Pt or Au and found the PZC to be up to 0.25 V more positive compared to Ag(111).²
