Analyzing the production chemistry data of the North Sea chalk reservoirs with a multiphase reactive transport model

Mirhossein Taheriotaghsara, Maria Bonto, Ali A. Eftekhari, Hamid M. Nick

Ali A. Eftekhari

Is the presenting author a research assistant/MSc/PhD student/Postdoc? No

AWF1

Production chemistry contains a wealth of data that describes the physico-chemical interactions between the injected water, formation water, crude oil, and reservoir rock. By combining a tuned surface complexation model for oil-brine and chalk-brine, a two-phase flow model, and published 4D seismic data, we try to explain the production chemistry data from a production well in the Halfdan field.
