3rd SIAM Symposium on Simplicity in Algorithms

SOSA 2020, January 6-7, 2020, Salt Lake City, UT, USA

Edited by Martin Farach-Colton Rutgers University, USA Inge Li Gørtz Technical University of Denmark, DK

The first Symposium on Simplicity in Algorithms showed that there was profound interest in a venue with the Algorithms community for simplification results. The second SOSA lived up to the expectations for excellence established in the first year. Now, with this third installment of SOSA, we are being to see what this conference will look like in its maturity. The papers were excellent. We accepted 15 of 55 submissions. Most heartening was the evidence that some papers appear to reflect work that was specifically undertaken for submission to SOSA, rather than being simplification results that were finally finding a venue for publication.

The PC spent a good deal of time discussing the meaning of simplification and trying to understand what constitutes a SOSA paper. This is all a health part of the growth a conference, as it establishes its unique voice on our community.

We would like to thank the PC for their hard work. Not only were their reviews painstaking and insightful, but their interest is making sure that the SOSA finds its voice is a strong indicator of the continued success of this conference.

Martin Farach-Colton and Inge Li Gørtz, Program Committee Chairs

Table of Contents

Session 1

Reducing 3SUM to Convolution-3SUM	
Bucket Oblivious Sort: An Extremely Simple Oblivious Sort	8
One (more) Line on the most Ancient Algorithm in History Bruno Grenet and Ilya Volkovich	15
Multiplicative Rank-1 Approximation using Length-Squared Sampling Ragesh Jaiswal and Amit Kumar	
Quantum Approximate Counting, Simplified Scott Aaronson and Patrick Rall	
Session 2	
Dynamic Generalized Closest Pair: Revisiting Eppstein's Technique Timothy M. Chan	
On the Change-Making Problem Timothy M. Chan and Qizheng He	
A Short Proof of the Toughness of Delaunay Triangulations Ahmad Biniaz	43
Adaptive Discrete Phase Retrieval Moses Charikar, Xian Wu and Yinyu Ye	47
Fast Fourier Sparsity Testing Grigory Yaroslavtsev and Samson Zhou	57
Session 3	
Nearly Linear Time Approximations for Mixed Packing and Covering Problems without Data Structures or Randomization	69

Kent Quanrud	
Distributionally Robust Max Flows	81
Louis L. Chen, Will Ma, James B. Orlin and David Simchi-Levi	
On a Decentralized (Δ+1)-Graph Coloring Algorithm	
Deeparnab Chakrabarty and Paul de Supinski	
Distributed Backup Placement in One Round and its Applications to Maximum Matching	
Approximation and Self-Stabilization	
Leonid Barenboim and Gal Oren	
Simple Label-Correcting Algorithms for Partially Dynamic Approximate Shortest Paths in	
Directed Graphs	106
Adam Karczmarz and Jakub Łącki
