Thermography in Arctic

BYG•DTU

Petra Vladyková, Ph.D. student, Aug 2007 – July 2010 **Technical University of Denmark**

Matrix method is to define a matrix consisting of 10 points (a-j) on the wall surface and obtaining the average, min & max temperature and the temperature difference of the surface which depends on the emissivity of a material. Emissivity $\varepsilon_{wood} = 0.95$, $\varepsilon_{concrete} = 0.94$.

1.LOW ENERGY HOUSE, Sisimiut, build in 2005

Basement (East), average T=14.8 °C

Winter garden (East), average T=6.92 °C

2.SINGLE FAMILY HOUSE, Sisimiut, build in 1947 and renovated in 1989

3.SINGLE FAMILY HOUSE, Sarfannguaq, build in 1982

Wall (East), average T=7.33℃

4.ELEMENTARY SCHOOL, Itilleq, build in 1952 and renovated 1984

Wall (East), average T=3.68 ℃

Wall (West), average T=11.19 ℃

Wall (West), average T=9.36 °C

Basement (North), average T=6.61 ℃

Basement (West), average T=16.31 °C

| Building | Insulation thickness [mm] | Average T [℃] | ∆T [°C] | Results |
|-------------------|--------------------------------------|----------------------------------|--------------|---|
| 1.LEH, Sisimiut | Wall: 300 mm | 4.95 - 5.01 | 1.7 | Homogeneous wall where the temperature field is very uniform. |
| 2.SF, Sisimiut | Wall: 175 mm Winter garden: 50 mm | 6.2 - 9.1 | 2.9 | More insulation and better windows. Problem: joint part of house and winter garden. |
| 3.SF, Sarfannguaq | Wall: 150 mm | 5.7 - 13.9 (West: 7.9 - 13.9) | 3.4 (6.0) | Insulate walls and basement walls, with special focus on west side of house. |
| 4.ES, Itilleq | Wall = 130 mm | 3.0 - 10.2 (West: 8.2 - 10.2) | 7.2 (2.0) | Complaints: cold air through basement. Insulate basement and close exhaust holes. |

Conclusion: The matrix method represents a simple method for the evaluation of current state of buildings in Sisimiut, Greenland, to determine the situation of walls or thermal insulation (thermal bridges, connection points, exhaust ventilation, etc.)

More results upon request in the report: "Arctic field work in building technology".
