BURDEN OF DISEASE (WWW.HEALTHDATA.ORG)

Burden of disease from mortality and morbidity attributable to leading behavioural and metabolic risk factors (2013). **Risk factors** are potentially modifiable causes of non-communicable disease (NCD). The four main NCDs (cardiovascular diseases, diabetes, cancers, chronic respiratory diseases) are estimated to account for 71% of total deaths in Iceland.

* DALY (disability adjusted life year) is a measure of the overall burden of a disease and indicates how many healthy years of life are lost due to premature death or due to decreased quality of life associated with a disease.
