A Corrigendum on

Colistin Resistance Mediated by *mcr-1* in ESBL-Producing, Multidrug Resistant *Salmonella* *Infantis* in Broiler Chicken Industry, Italy (2016–2017)

by Carfora, V., Alba, P., Leekitcharoenphon, P., Ballarò, D., Cordaro, G., Di Matteo, P., et al. (2018) *Front. Microbiol.* 9:1880. doi: 10.3389/fmicb.2018.01880

In the original article, there was an error in the Materials and Methods, subsection Isolates. The four *S. Infantis* isolates originated from broilers ($n = 2$) and broiler meat samples ($n = 2$).

A correction has been made to Materials and Methods, subsection Isolates: Four multidrug resistant (MDR) *S. Infantis*, displaying a colistin MIC value ≥ 4 mg/L, were detected among 324 *S. Infantis* isolates collected in the frame of antimicrobial resistance (AMR) monitoring activities conducted from 2001 to 2017 by the National Reference Laboratory for Antimicrobial Resistance (NRL-AR) and screened for antimicrobial susceptibility. The four *S. Infantis* isolates originated from broilers ($n = 3$) and from broiler meat sample ($n = 1$) (Supplementary Table 1).

The authors apologize for this error and state that this does not change the scientific conclusion of the article in any way.

The original article has been updated.

Conflict of Interest Statement: The authors declare that the research was conducted in the absence of any commercial or financial relationships that could be construed as a potential conflict of interest.
